## Controllers

CC Number	Name	Description
1	MW (Modulation Wheel)	Tremolo

## How to load the sound

1. Download the Kontakt File
2. Clic & Open the Kontakt File
3. Play & Enjoy

## FAQ.

### Why Kontakt is in Demo mode and stop working after 15 minutes ?

All products are 100% functional. These aren't demos !  
If Kontakt indicates a demo mode is that you use an unregistered or free version.  
Please, use a registered version of Kontakt (Kontakt 3.5 minimum) to enjoy the sounds.  
DON'T USE KONTAKT PLAYER ! this is a free program for sound libraries from native instruments.

### Why is there only one sound for Kontakt and EXS24 samplers

Kontakt & EXS24 has got only one preset : the mainpatch, he sounds exactly like the Motif's mainpatch.  
EXS24 or Kontakt don't manage the presets like a Hardware (like Motif or Kronos).  
With Hardware, it's very easy to create a patch, you edit your sound and you save it on a user bank.  
With Software, you can edit the sound on sampler but on the host application too (Logic Audio or MainStage).  
For example : -if you want create "A08 : Disco Strings ( w/o falls ) » motif preset, the best way is to change the velocity range on mainstage , not on exs24 or Kontakt  
-If you want to "2 Octaves" , load 2 EXS24 on 2 different tracks and up the second one to +12 1/2t.  
You can recreate all the 8 presets because they are all variations of the mainpatch. it depends on your way to work.  
Rhodes ans Wurlitzer have got one preset too for EXS24 & Kontakt because only FX change : -the motif FX engine is not the same like the MainStage FX !
